## SIG Meeting 2: Evaluating Research

*Providing peer feedback early on*

1. Once you have finished Activity 6, exchange your worksheet with a peer in your SIG.
2. Review their research proposal, and answer the following questions before discussing with them:
  1. **Research question:** Is the research question clear and well-stated? Does the research seem feasible? Is there anything unclear about the question?
  2. **Methods:** Identify 1 other method or tool/approach they might employ in their research. *For example, maybe they have identified only quantitative methods and there is opportunity for a relevant qualitative study.*
  3. **Budget & Resources:** How feasible is the proposed research in terms of cost, time, & resources?
  4. Would you fund this research? *Would you want to read a research paper addressing this proposed research question? Why or why not?*
3. Provide feedback to your peer/SIG about the proposal, ask them to clarify any points of confusion, and suggest updates to their research design & methodologies, if you see any. Take the time to listen to your colleagues as well, and update your Activity 6 worksheet if applicable.
