Activity 7: Technical Writing

Practice clear & concise communication of technical concepts

- 1. What is the title of your research paper?** *Does not need to be the final version.*

- 2. What is the overall problem your research project addresses?**

- 3. Why is the problem important?** *Be specific! (e.g. not “cybersecurity is important”)*

- 4. What categories of approaches are there?** *Use your work from a previous activity.*

- 5. How are these approaches evaluated?** *Be specific! (e.g. not “experiments” - identify the benchmarks, datasets, etc.)*

- 6. Have you identified a “gap” in the research or shortcoming of these state-of-the-art methods?**
If not, it's ok! If so, provide some information here. This could be as simple as “they're all too slow to be used in real-time contexts.”
